

THE BITCOIN CORPORATION

Co-Founder/CTO Partnership Proposal

Strategic Partnership Opportunity - Building the Future of Computing

Document Version: 1.0 | Date: November 2025 | Classification: Partnership Proposal

The Bitcoin Corporation LTD | UK Company No. 16735102

To: Prospective CTO/Co-Founder

From: CEO, The Bitcoin Corporation Limited

Date: November 2025

Re: Strategic Partnership Opportunity - Building the Future of Computing

The Proposition

I'm inviting you to join me as **Co-Founder and CTO** of The Bitcoin Corporation to build something that actually matters: **tools people will use every day**.

While the BTC ecosystem burns energy on endless debates and political theater, we can channel that same passion into **building beautiful, simple tools** that demonstrate Bitcoin's real potential.

Why This Matters Now

The blockchain space is drowning in complexity:

- Everyone's building "revolutionary" L2s that nobody uses
- ZK-proofs solving problems users don't have
- Tokenomics so complex they need PhD-level whitepapers

We're taking the opposite approach: Making blockchain invisible by integrating it into familiar workflows.

The Vision: Simplicity as Revolution

The Core Insight

Users don't want to "use blockchain" - they want to:

- Write documents (Bitcoin Writer)
- Edit photos (Bitcoin Photos)
- Manage files (Bitcoin Drive)
- Send emails (Bitcoin Email)

Our innovation: The save button costs a microtransaction (thousandth of a penny) but gives permanent, immutable backup.

Why This Wins

1. **Users get value immediately** - better tools, not blockchain lectures
2. **Developers stay sane** - we're not inventing new physics
3. **Network effects compound** - 35 interconnected apps, each driving usage of others

What We've Built Already

35 Applications across the full productivity spectrum:

- **28 on Next.js 15** (already standardized)
- **Complete frameworks** for tokenization, exchange, governance
- **Working color scheme** and design system
- **Comprehensive documentation suite**

The Bitcoin Corporation LTD | Co-Founder/CTO Partnership Proposal | Strategic Document v1.0

This isn't vaporware - it's a functioning ecosystem that just needs your technical leadership to scale.

Your Role: CTO & Co-Founder

Technical Leadership

- **Architecture decisions** for scaling 35+ applications
- **Developer experience** - making Bitcoin development feel like regular web dev
- **Quality standards** - "it just works" philosophy across the ecosystem

Strategic Partnership

- **Equity co-founder** position with significant ownership
- **Technical vision** aligned with simplicity-first approach
- **Industry credibility** from your background and reputation

Why Now Is Perfect Timing

The Builder's Opportunity

There's incredible intellectual energy in the Bitcoin community that could be channeled into building practical solutions that demonstrate Bitcoin's real-world utility.

The Development Advantage

While others focus on protocol debates, we're **shipping software people actually want to use**.

The Demonstration Effect

When Bitcoin Writer has 100k daily users saving their work to chain for pennies, that proves utility better than any whitepaper.

The Business Model That Actually Works

The Bitcoin Corporation LTD | Co-Founder/CTO Partnership Proposal | Strategic Document v1.0

- **No ICO theater** - just build tools people pay to use
- **No complex tokenomics** - simple: contribute code, earn equity tokens
- **No VC pressure** - we're profitable from Day 1 through tool subscriptions

The Choice

Option A: Continue fighting endless battles in BTC land, burning energy on politics and drama

Option B: Build the infrastructure that makes Bitcoin useful for billions of people through beautiful, simple tools

What I'm Offering

Equity Structure Options

Flexible partnership terms based on your preferred level of involvement:

- **Option A: 65%/35%** - You lead as founding trustee with majority control
- **Option B: 51%/49%** - You take majority control with full technical and strategic leadership
- **Option C: 50%/50%** - Equal partnership with shared decision-making
- **Option D: 49%/51%** - You focus primarily on technical direction while I handle operations

Timeline Flexibility

Low-pressure approach: We build together for a year at minimal cost, establish the trust structure organically, with a target settlement date of June 2026. No rush, no pressure - just focused building.

Partnership Benefits

1. **Technical autonomy** - you set the architecture and standards
2. **Calm building environment** - no crunch, no artificial deadlines

3. **Real impact** - tools that people actually use and love

The Bitcoin Corporation LTD | Co-Founder/CTO Partnership Proposal | Strategic Document v1.0

- 4. **Flexible structure** - adapt ownership and roles as we build

The Proposal

Joint Development Year (2025-2026)

Structure: £100k total funding (£50k each) to co-develop the ecosystem through June 2026

- **Phase 1:** Build and prove the platform together (12 months)
- **Phase 2:** Establish trust structure based on proven results (June 2026)
- **Advantage:** Low-pressure development without premature legal complexity

What This Enables

- **Dedicated focus** - both developers fully committed to the ecosystem
- **Technical partnership** - collaborative architecture and implementation
- **Proven foundation** - establish trust structure on demonstrated success
- **Market validation** - build user base before formal equity distribution

This approach lets us **build first, formalize later** - proving the concept through working software rather than complex legal structures.

Ready to build the future together?

Let me know when you'd like to see the ecosystem in action.
